**“With Oracle’s JD Edwards EnterpriseOne, we can ensure that our numbers are timely and accurate. We can get the bulk of our reports out in a half day, instead of three days.”** – Brian Mazeski, Controller, Uranium One Americas, Inc.

## Uranium One Americas Inc. Centralizes Accounting Processes to Support Entry into U.S. Mining Business

Uranium One Americas Inc. is part of Uranium One Inc.—one of the world’s largest publicly traded pure uranium producers, with a globally diversified portfolio of assets in Kazakhstan, the United States and Australia.

### Challenges

- Replace legacy financial management application with an integrated suite to support a large number of mining projects
- Provide one simple log-in to financial systems and centralize data for several U.S.-based entities
- Improve accuracy and timeliness of monthly management reports

### Solution

- Worked with Oracle Partner iSP3 to implement Oracle’s JD Edwards EnterpriseOne 9.0 financial and procurement management applications for Uranium One’s North American operations in just three months
- Enabled the company to provide an accurate, comprehensive management report on the same day as the financial close—three days faster than the previous system
- Improved visibility into project spend across 80 properties, enabling Uranium One to tie spending figures to monthly statements for better control over project budgets
- Replaced paper-based purchase order process with automated approval routes for seven office locations in the U.S.
- Centralized the accounts payable function, enabling vendors to send all invoices to Denver and improving visibility into the status of each invoice, eliminating lost and late invoices
- Leveraged implementation best practices from U.S. deployment to roll solution out to Canadian headquarters
