*i*SP³

Partner

*i*SP³ was involved in the original implementation at BC Transit when they first acquired JD Edwards E9.0 and have provided JDE consulting services to BC Transit throughout the years. BC Transit released an RFP in 2015 in search of a consulting firm that they can partner with on this very important initiative and *i*SP³ was successful in winning the trust of BC Transit. Scope and Design was completed and signed off in December 2016 and project commenced in February of 2017 with Go Live in the spring of 2018.

About *i*SP³

*i*SP³ is an Oracle business partner certified in Finance, Project Costing, Supply Chain, Technical CNC and Accelerated Solutions. *i*SP³ offers services in upgrades, net new implementations, product development, project management and training. Consultants across Canada, the US and Latin America. Client base in North America, Latin America and Eastern Europe.

The Organization

In 1979, the provincial government created the Urban Transit Authority (UTA), a new Crown corporation to coordinate the planning, marketing and funding of municipal transit systems throughout the province. Starting with 13 systems, the vision for the UTA was to provide local governments with an increased role in the decision making and funding of their community transit systems. A year after the start of the UTA, operation of the Victoria and Vancouver transit systems transferred from BC Hydro to the new organization and in 1982, it was renamed BC Transit. Today, BC Transit have over 1000 vehicles across the province of British Columbia and continues to evolve and transform to meet the needs of the people of British Columbia.

Project Details

BC Transit acquired JD Edwards EnterpriseOne E8.0 in 2002 replacing their legacy system to help manage and support their operations growing in size and complexity. In 2015, BC Transit recognized the need to upgrade from a version that is now 5 major releases behind so that they can take advantage of the new features and functionality out of the box that E9.2 has to offer. In addition, the project required the restructuring of the Chart of Accounts, implementing new modules that were not in the original scope in 2002 as well as develop within JD Edwards a custom application that will replace their third-party data entry system (e-billing) used by RTS operating companies which is critical to the operation for service requests and payments. It was critical that the project is completed on time with a planned go live in April 2018. **The project was completed successfully on time and on budget.**
